

DATA CENTER LIFECYCLE MANAGEMENT

ARE YOU CURRENTLY EXPLORING THE POSSIBILITIES OF UPDATING YOUR DATA CENTER?

Whether you are expanding to a new facility, updating your existing one, or looking to consolidate; Excipio will be there to help identify engineering issues, streamline processes, and build strategies that will minimize your risk and financial loss.

Excipio's Data Center Lifecycle Management helps clients through comprehensive gap analysis to eliminate engineering issues, explore consolidation, and alternative strategies, process, and timelines minimize risk and financial loss.

Excipio's experience crosses a wide variety of industries. This provides additional value to our clients, as we are able to draw upon the best practices of multiple organizations and industries. It is our experience that technology remains relatively similar across the industries. The processes are the primary variable, which are impacted by the experiences of the client's staff, the client's internal business practices, and applicable regulatory restrictions.

QUALITY DATA YOU CAN COUNT ON.

COMMON PAIN POINTS

- Emergency impact of data center outages
- Overburdened power and cooling systems
- Overwhelming number and expense of data centers
- Chaos from disjointed data center strategy

COMMON BENEFITS

- Thorough understanding of their data center's true technical, business, and financial current state
- Identification of potential options for short and long term cost savings
- A strategy which meets all the client's requirements
- A comprehensive, unbiased, strategic roadmap to implement changes
